Experience

Healthcare Support, LLC **Mar 2026**

Software Developer *Los Angeles, USA*

- Rebuilt a 7-year-old medical-evaluation scheduling platform on .NET 10, ABP Commercial, and Angular 20; deployed it to an on-premises Ubuntu server I provisioned. Shipped 846 commits, 390 PRs, and 17 architecture decision records.
- Migrated the platform from shared-database row filtering to one physical database per clinic office, proving isolation with a test harness that disables the framework's tenant filter and asserts cross-office records stay invisible.
- Built two transactional outboxes with SHA-256 idempotency keys and atomic database-lease row claiming, plus reconciliation jobs with per-office error isolation, so notifications are never lost or double-sent under concurrent workers.
- Ran a five-method bake-off for medical-record page-stream segmentation against hand-labelled ground truth; the shipped sliding-window method won on Document-F1, recall, and cost simultaneously, at ~1/100th the API calls (2 vs 226).
- Proved document segmentation is a vision task, not a text task, by replicating a published OCR approach and watching recall drop from 0.92 to 0.66. Rejected four improvements on measured evidence.
- Root-caused a silent pipeline hang, no exception, so retry never fired to an OpenMP/Tesseract deadlock. Proved it in isolation (0/60 tasks versus 60/60) and bounded all four thread pools.

One Community Global **Sep 2025 - Mar 2026**

Software Engineer *Remote, USA*

- **Architected 15+ RESTful API endpoints** and MongoDB aggregation pipelines for the Building Management analytics dashboard using Node.js and Express; delivered filterable cost-correlation, labor-cost, issue-breakdown, expenditure-comparison, and tool-utilization APIs, enabling real-time project reporting across the organization's volunteer and construction datasets.
- **Resolved 5 critical data-integrity bugs** in volunteer statistics reporting by rewriting MongoDB aggregation pipelines, fixing double-counting, misclassified hourly-distribution buckets, and stale summary counts, improving dashboard accuracy across 1,000+ volunteer records and eliminating misleading chart renders.
- **Built 12+ interactive React/TypeScript UI components,** including Recharts/Chart.js visualizations, multi-select filter panels, CRUD issue tables with pagination, and a cost-breakdown donut chart with drill-down; implemented WCAG AA-compliant dark mode across 20+ components using CSS Modules and CSS variables, with responsive layouts across mobile, tablet, and desktop breakpoints.

Tech Mahindra **Jun 2022 - May 2023**

Software Development Intern *Pune, India*

- Delivered an internal mock API service letting 500+ developers simulate 15+ REST endpoints, cutting integration-testing time ~15%, using Node.js, OpenAPI/Swagger, PostgreSQL, Redis rate limits, and JWT/OIDC via Okta.
- Automated contract intake with React 18 and TypeScript on Spring Boot REST, cutting processing time ~35%; hardened microservice authentication with OAuth2/OpenID Connect and resolved 5 critical vulnerabilities.

Projects

Glasshouse - LLM Privacy Self-Audit glasshouse-frontend.vercel.app

- Built the inference engine for a privacy tool showing users what an LLM can infer from their posts: an N=3 self-consistency ensemble, hierarchical geographic clustering, and consent-gated async execution on FastAPI and Redis/arq.
- Designed the privacy boundary: per-user pgcrypto envelope encryption with crypto-shred erasure, row-level-security isolation a CI gate verifies, and one model-gateway egress point. Published a 25-path OpenAPI contract that unblocked parallel frontend work.

Skills

- **Programming**: Bash, TypeScript, Javascript, C#, Python, SQL, Algorithms and Data Structures
- **Backend Technologies**: FastAPI, Microservices, Node.js, REST, ASP.NET Core, .NET 10
- **Frontend Technologies**: CSS, HTML, Next.js, React.js, Redux, Tailwind CSS, Angular
- **DevOps & Cloud Infrastructure**: Docker, AWS (EC2/S3), GCP, AWS Lambda, GitHub Actions, Nginx, Linux, SonarQube
- **Databases**: MongoDB, ChromaDB, MySQL, PostgreSQL, SQLite, Redis, EF Core
- **AI / ML**: Scikit-Learn, Tensorflow, LLM pipelines, prompt engineering, model evaluation, Vertex AI
- **Development Tools**: Agile Methodologies, Cursor IDE, Git, Github, Jest, Render, Vercel, VS code, Claude Code

Education

University of California, Riverside **Sep 2023 - Mar 2025**

Master of Science, Computational Data Science *Riverside*

- **GPA:** 3.67
- **Coursework:** Big Data Management, Advanced Operating Systems, Database Systems, Artificial Intelligence, Machine Learning, Spatial Computing, Data Analytics

Vishwakarma Institute of Information Technology **Aug 2019 - May 2023**

Bachelor of Technology - BTech, Computer Engineering *Pune*

- **GPA:** 3.84
- **Coursework:** Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Compiler Construction, Computer Architecture, Theory of Computation
